

High Pressure Treatment

A rapid and environmentally friendly solution for vermin-free commodities.

Suitable for: e.g. grains, seeds, pulses, bakery products, spices and herbs.

100% SATISFACTION GUARANTEED

High Pressure Treatment

Insects are a common threat to raw materials. LenersanPoortman operates two advanced high-pressure autoclave tanks which are used to make your raw materials and products insect/larva/egg free, in a very environmentally and biologically friendly way. Within 4 hours time, the combinations of CO2 and high pressure (20bar+) eradicates pest and vermin. No pesticides or any other chemicals are used in this treatment.

We can handle bulk products as well as packed and palletized products, as long as the packed products are not airtight and/or vacuum.

The autoclave process is an official recognized treatment for biological (EKO) products. Our company is SKAL certified.

Advantages

- Environmentally and biologically friendly treatment
- Treatment only takes 4 hours
- Well reachable, near the port of Rotterdam
- 100% guarantee on the treatment
- Skilled experts
